# Android Internship Test

Create an Android app which shows a list of Images on screen.

1. Create a screen with a button (View Images), clicking on this button should take user to the second screen.

2. Create another screen with a List(RecyclerView) of images which will be fetched from the API mentioned below.

Screen Wireframes:

Good to have:

● MVVM architecture.

● API implementation using Repositories and ViewModel.

API to use:
https://jsonplaceholder.typicode.com/photos
Use 'url' key to show image.
